Ortho-Station Musculoskeletal Lab.

A Comprehensive Biomechanical
Assessment Lab in a Room

Why MSK Labs?

Biomechanical assessment of the musculoskeletal system is always a challenging work for specialized practitioners. Musculoskeletal chain is composed of several dependent rings which are in close physical interaction. Such a complex system needs an integrated multifunctional examining system that accurately assesses all the rings independently, and simultaneously considers them as connected components of a unique chain.

Ortho-Station

Ortho-Station, powered by ARAMED is an innovative platform which captures all aspects of the biomechanical chain through a fully predefined protocol. The user-friendly software guides user to have a comprehensive quantitative analysis on all rings of the biomechanical chain.

All clinical restrictions, including time and space limitations, economic efficiency, harmless examinations (X-ray free), ultimate accuracy and durability of hardware are guaranteed to provide the practitioner a wonderful experience.

Ortho-Station Highlights

Step by Step
Exam, Diagnosis and Treatment

Foot Pressure Analysis

Stabilometry Exams

Foot Posture Index

Interactive Postural Evaluation

Back Surface 3D Scanning

Spine Assessment

3D Foot Scanning

Insole Manufacturing

Corrective Exercises
